

Task 1 – Rectangular Marquee Tool

Short Note:

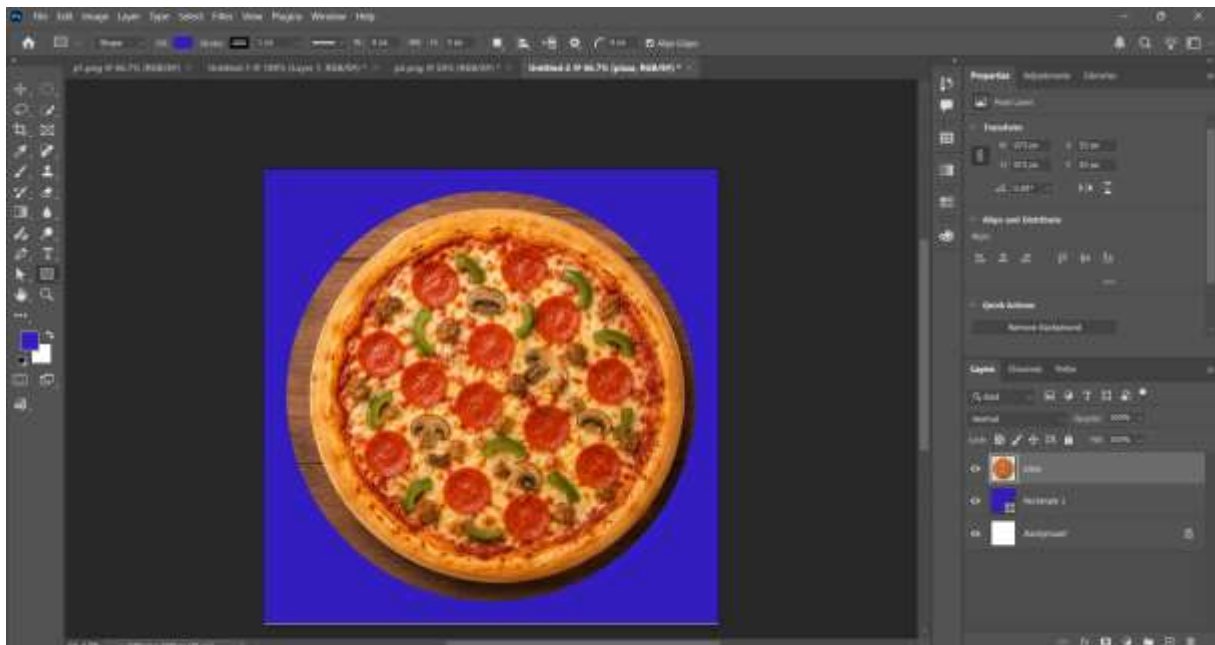

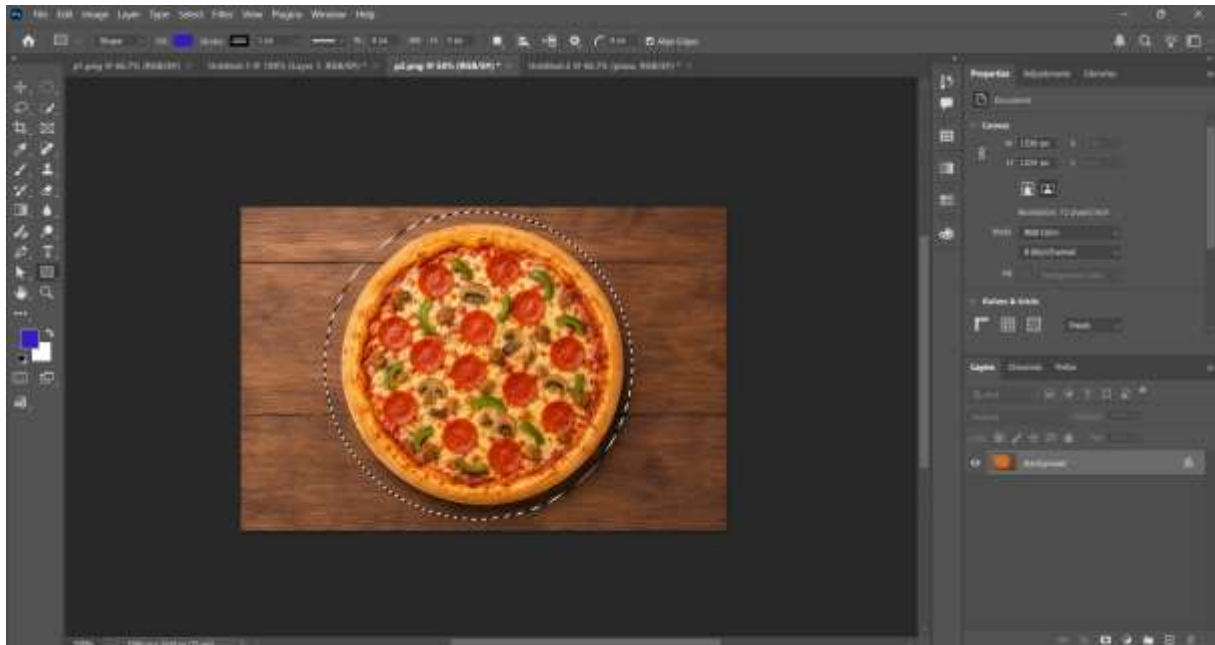

I used the Rectangular Marquee Tool to select one person from a group photo. The selected area was copied and pasted into a new Photoshop document. This demonstrated how rectangular selections can be used to isolate subjects from an image.

Task 2 – Elliptical Marquee Tool

Short Note:

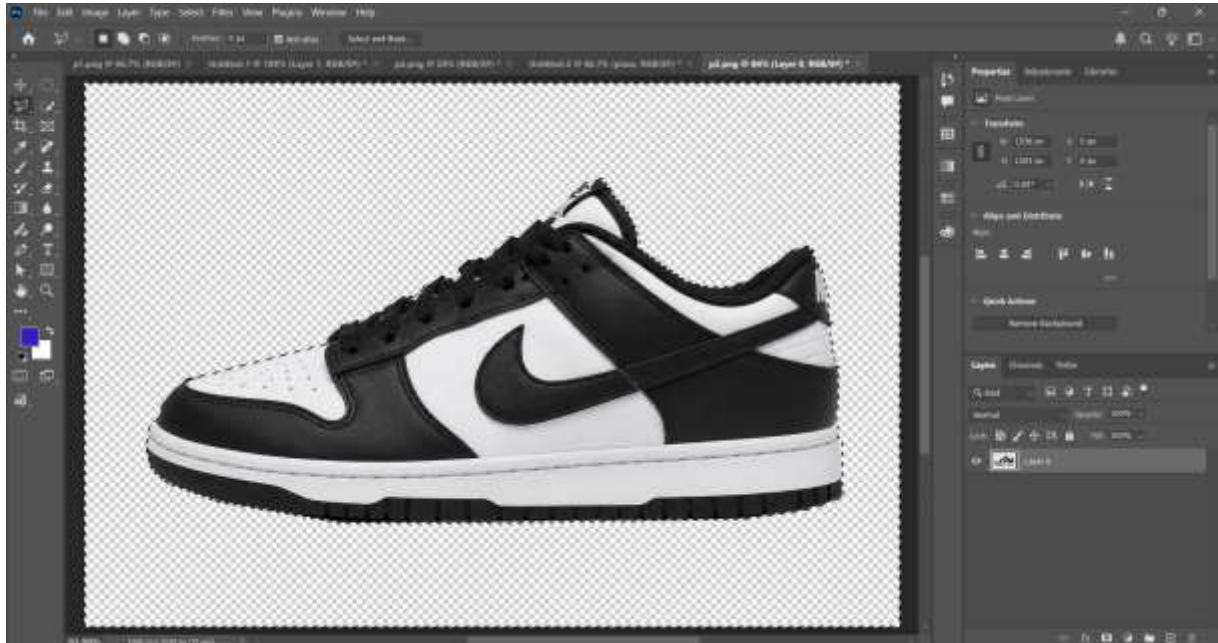

I used the Elliptical Marquee Tool to create a circular selection around a pizza image. The selected object was copied and placed onto a contrasting solid-color background. This demonstrated circular object extraction using selection tools.

Task 3 – Polygonal Lasso Tool

Short Note:

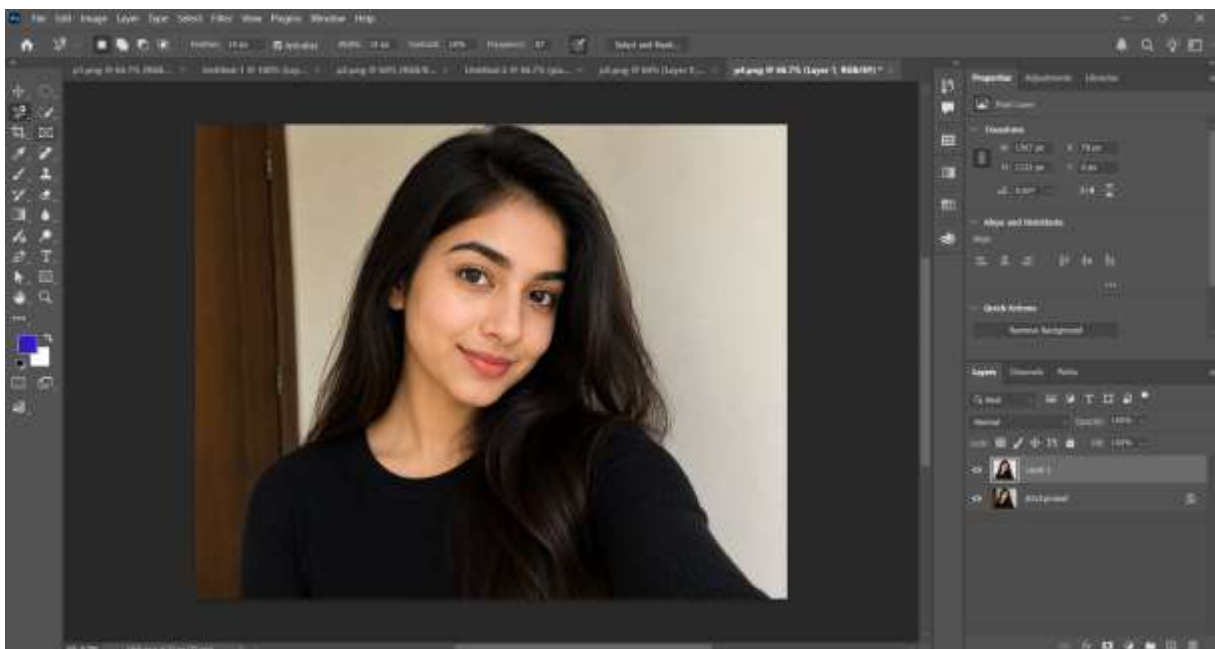

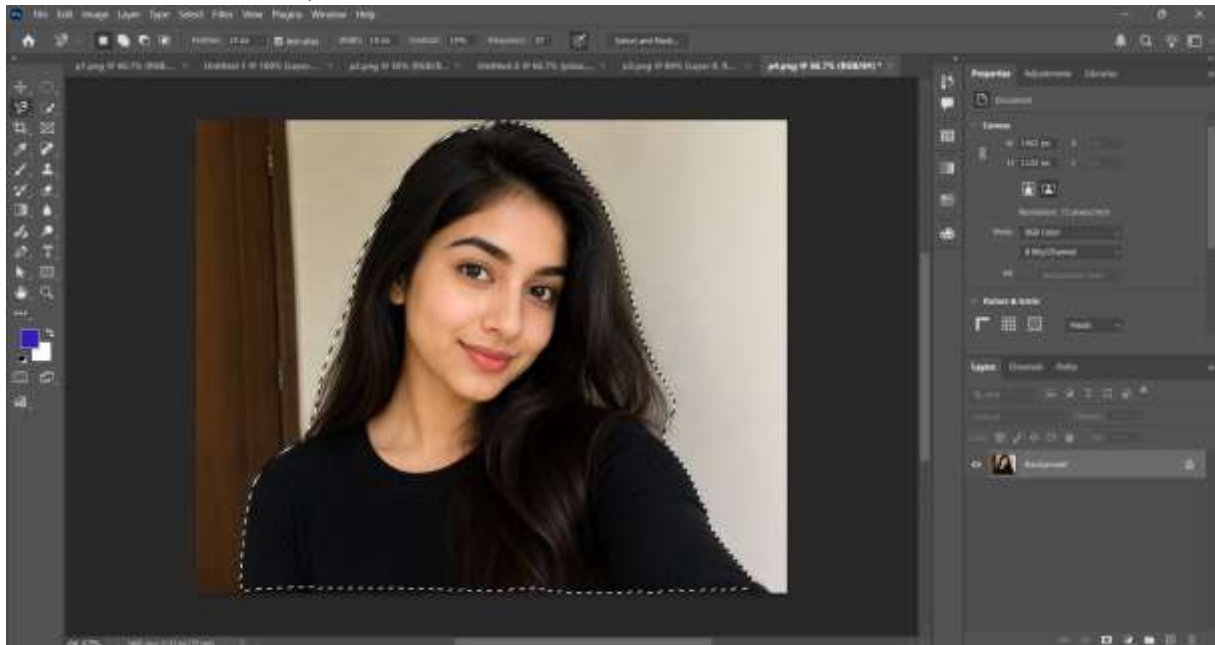

I used the Polygonal Lasso Tool to carefully trace the outline of a sneaker. After completing the selection, I removed the background, leaving only the shoe visible. This demonstrated precise object selection using straight-edge segments.

Task 4 – Magnetic Lasso Tool

Short Note:

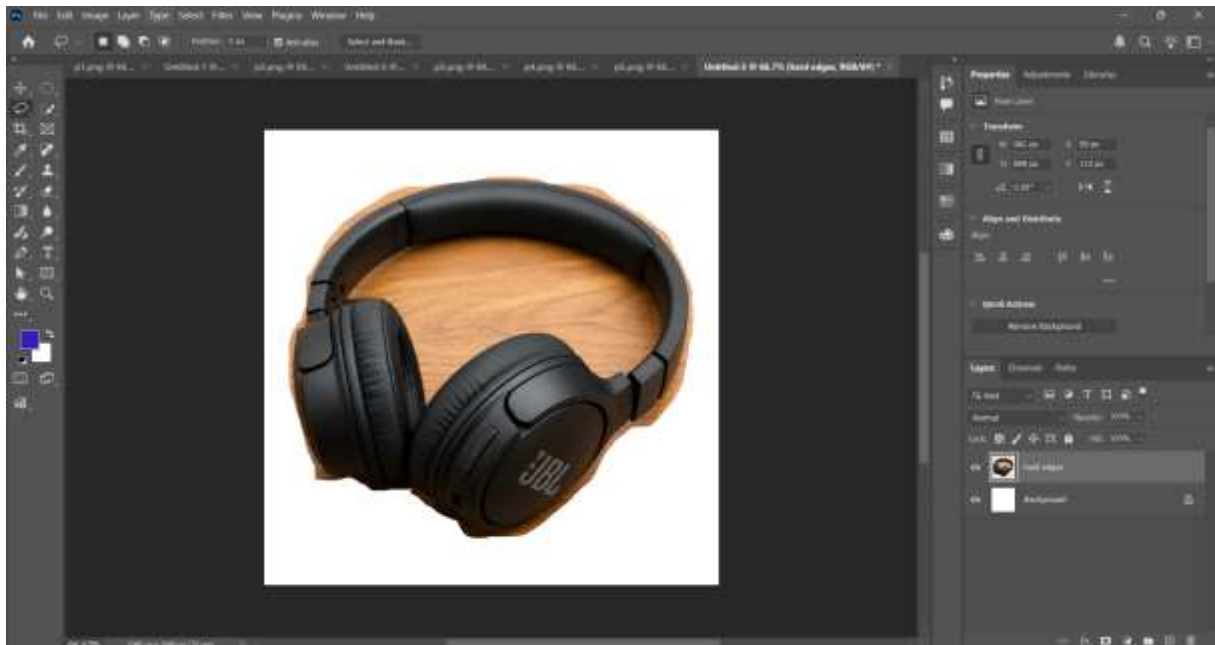

I used the Magnetic Lasso Tool to trace around a portrait subject. A feather value was applied to create smooth edges before copying the selection to a new layer. This demonstrated edge detection and soft selection techniques.

Task 5 – Lasso Tool with Feathering

Short Note:

I used the Lasso Tool to select a pair of headphones and created two versions of the cutout. One version used a feather value of 0 px for sharp edges, while the other used 20 px for softer edges. This demonstrated the effect of feathering on selection boundaries.

HARD EDGE

SOFT EDGE
